6/13/2014	SB1400291	3001 CONNECTICUT AVE NW	We will drill a total of seventeen, 6-inch diameter geotechnical soil test borings. Six of the borings, B1 - B5 ? B7, will be drilled to a depth of 10 feet, four of the borings, B6 ? B8 - B10, will be drilled to a depth of 15 feet, and seven borings, SWM-1 to SWM-7, will be drilled to a maximum depth of 10 feet for infiltration testing. Infiltration borings, SWM-1 to SWM-7, will be temporarily covered with polyethylene sheeting to help prevent groundwater contamination from surface runoff and/or precipitation, prior to testing on the following day. The infiltration testing will be performed the next day and abandoned upon completion the same day. Drilling spoils will be containerized in 55-gallon drums to be removed after chemical laboratory results have been received. Boreholes will be tremie-grouted upon completion. 6/16/2014	B1408613	1530 P ST NW	Carnegie's 16th Street steps are in need of restoration. Contractors have proposed removing and replacing mortar joints throughout the stairs to include the top landing, top stair case, middle landing, middle stair case, first landing and first stair case. In addition to repointing, they have proposed replacing 85 of the damaged stones with stones similar to the existing stones. The stones in good condition would be left untouched. The goal of the project is to restore the steps to the way they looked when originally built. 6/26/2014	B1310967	1325 36TH ST NW	The school is proposing a complete renovation of the Upper School existing classroom areas to create more efficient floor plans with classroom that better serve the size of the existing classes and that incorporate modern technologies. New bathrooms and an elevator serving all three floor are proposed to be constructed within the renovated areas. Because of the limited work duration imposed by the school year cycle, the work is proposed to be constructed in two phases, with the theater reconstruction and new classroom being constructed in the summer of 2014 and the interior renovation including new bathroom and elevator being constructed in the summer of 2015. 6/11/2014	SB1400307	3700 O ST NW	We will perform a total of eight borings on the proposed site. The borings will be extended to depths on the order of 30 feet below existing grades. The borings will be evenly spaced throughout the site. The borings will be drilled utilizing 3.25-inch hollow stem, continuous flight augers. The borings will be performed utilizing an ATV-mounted drill rig and will generate an approximately 6-inch annulus. Sampling will be conducted using a 2-inch O.D., split-barrel sampler driven into the soil a distance of 18 or 24 inches by a 140-pound hammer falling 30 inches. The samples will be placed in glass jars for geotechnical classification. Additional eight infiltration test will be performed at a max depth of 10ft. The purpose of the Phase II Environmental Site Assessment is to evaluate the subsurface environment, where accessible, to determine if the past use of the property has impacted the subsurface soils and groundwater. The scope of service will involve collecting, field screening and laboratory testing of soil and groundwater samples collected from borings advanced across the property. ECS will employ a GeoProbe® direct-push drill rig to collect soil and groundwater samples from up to six locations on the 3700 O Street property. Soil borings will be advanced until either groundwater or probe refusal is encountered. The Geoprobe® utilizes steel rods and direct-push technology hydraulic hammer to advance two-inch diameter macro-core samplers for soil sample collection. The macro-core samplers are equipped with a new disposable polyethylene liner for each soil sample collected. As the macro-core sampler is driven deeper, it collects a relatively undisturbed soil core, allowing for soil classification and sampling. 6/25/2014	SB1400349	1640 KALMIA RD NW	We will perform a total of two soil borings on the proposed site. The borings will be advanced to a depth of 50 feet below existing site grades, and will be located within the bounds of the private property. The borings will be drilled utilizing 4.25-inch hollow stem, continuous flight augers and/or mud rotary drilling. The borings will be performed utilizing a Truck or ATV-mounted drill rig and will generate an approximate 6-inch annulus. After geotechnical exploration is completed, the borings/auger probes will be backfilled with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. Borehole/auger probe abandonment will be performed by tremie-grouting via a positive-displacement pump from the bottom of the borehole/auger probe.
